Online: June 23, 2022

Coherent writing skills are essential prerequisites for the construction of the academic discourse, specifically at the undergraduate level. Coherence in writing can be attained via the utilization of textual metafunction. The textual metafunction realized by the Theme-Rheme system organizes ideational and interpersonal meanings in discourse to generate coherence at the local and global levels. The mixed-method research aims to investigate the coherent writing skills of undergraduate Pakistani learners. The Theme and Thematic progression patterns (T/TP) based on the theoretical framework of Systemic Functional Linguistics (SFL) were applied to twenty-five argumentative essays of Pakistani learners retrieved from the International Corpus of Learners English (ICLE). The findings demonstrate that most undergraduate Pakistani English Learners overused prenominals at the onset of clauses and constant thematic progression choices to link the clauses. These two factors formed Pakistani learners’ argumentative writing into descriptive writing, and the underutilization of interpersonal and textual thematic choices further indicated Pakistani learners’ unawareness about the social norms of persuasive writing. The pedagogical implications of this study provide English Language Teachers (ELTs) and English Language Learners (ELLs) with a wide range of explicit lexico-grammatical resources to maintain the coherence at the text level.

Introduction

The acquisition of argumentative writing skills is likely to be a time-consuming and complex skill as compared to other language skills since the complexity of writing demands the simultaneous management of linguistic, motivational, and cognitive processes (Mendoza, Lehtonen, Lindblom-Ylänne & Hyytinen, 2022). In the second language (L2) context, the significance of argumentative writing, as mentioned by Kroll (2003), can be assessed through its presence as an essential component of internationally recognized English language tests (e.g., IELTS, TOEFL, TOIEC, TESOL, O/A Level Cambridge Assessments, and
GRE, etc.) to achieve higher education admissions. At the university level, learners are, primarily, required to construct well-formulated argumentative responses to a given prompt by adopting a stance supported by academically reliable reasons (Hirvela, 2017; Martin, 1993). Argumentative writing comprises not only reasons and their plausible explanations but also uses of appropriate lexico-grammatical resources to develop cohesive and coherent structures to persuade uncommitted readers. The cohesive and coherent writing, therefore, is an important parameter for successful argumentative communication in academia. Coherence (i.e., a text’s relations to its social and cultural context) in discourse can be achieved through a textual metafunction realized by Theme-Rheme system as lexico-grammatical structures in Systemic Functional Grammar (SFG). Numerous studies (e.g., Schleppegrell, 2001, 2004; Christie, F., & Dreyfus, 2007) confirm that the analysis of theme and thematic progression (T/TP) resources can be employed to gauge the coherence of English Language Learners’ texts (ELLs). T/TP arranges ideational and interpersonal meanings into the coherent and meaningful form through the encoding of semantic meanings and generic schematic structures into the text (Thompson, 2014). Therefore, this research selected SFL theoretical framework to analyze the textual metafunction in Pakistani undergraduate learners’ argumentative essays whether the thematic choices used in Pakistani essays generate coherence or not.

In the Pakistani academic context, various researches (Gill & Janjua, 2020a, 2020b, 2020c; Haider et al., 2021; Bukhari & Shakir, 2020) indicated academic writing issues, e.g., inappropriate and incoherent expansion of ideas, in Pakistani learners’ written responses because of having weak syntactic organization at the clause and discourse level. The writing issues faced by Pakistani learners compromise the effectiveness of their writing. Secondly, the majority of Pakistani English Language Teachers (ELT) preferably resort to grammatical translation methods (GTMs) rather than using functional grammatical methods required to satisfy the social and cultural demands of academic discourse.

To address the foregoing academic writing issues, the researchers applied a Theme/Thematic progression framework to argumentative essays written by Pakistani undergraduate students (Chang & Lee, 2019). The appropriate use of T/TP choices maintains authorial stance, coherence, and the logical flow of information. This research, thereby, analyzed thematic choices used in Pakistani argumentative writings and compared the results with the findings of previous researches to find out whether the thematic resources in the Pakistani argumentative essays generate coherence or not. Thus, it is likely to infer that the findings of this research will equip ELTs and Pakistani ELLs with a broad range of thematic choices required in academically valued writing constructions.

**Literature Review**

This section offered an overview of the past researches that were further divided into three groups. Firstly, numerous studies compared the Thematic choices deployed by the learners belonging to different linguistic backgrounds, whereas other researches analyzed the impacts of disciplinary backgrounds on the students’ Thematic choices. Finally, the studies analyzed the use of themes on proficiency levels were reviewed.
In regards to examining different linguistic backgrounds, the following studies (e.g., Green et al., 2000; Herriman & Boström Aronsson, 2009; Wei, 2016) detected a higher number of textual themes (e.g., moreover, and, and in addition to, etc.) and interpersonal themes (e.g., in my opinion, probably, etc.) in EFL and ESL learners compared to L1 learners. The ESL/EFL learners utilized conjunctive adjuncts of temporal (e.g., meanwhile, before that, later on, next, soon, finally), additive (e.g., also, moreover, in addition, besides), and adversative (e.g., on the other hand, however, conversely) types. In terms of interpersonal themes, modal adjuncts to express opinions (e.g., in my opinion, personally, to my mind), persuasion (e.g., evidently, apparently, no doubt, presumably), and evaluation (unwisely, understandably, mistakenly, foolishly) were excessively found out. The overuse of textual and interpersonal themes constitutes marked themes leading to incoherence inside the clauses and among the clauses (Green et al., 2000).

Examining the disciplinary backgrounds on the uses of themes, the analysis of a study conducted by North (2005) indicated that the higher-graded essays of Arts students contained a higher proportion of textual, interpersonal, and experiential themes to explicitly present structures and student writers’ commitments to their views in comparison to science students’ essays having mostly bald assertions.

Finally, the proficiency level even in the L1 context affects the appropriacy of thematization and coherence in discourse. The following studies (Mellos, 2011; Xuewen, 2010; Hewings, 2004; Chang & Lee, 2019) compared high and low coherence essays of ESL undergraduate learners and observed that the low coherence essays contained the overuse of unmarked themes of simple nominal groups, pronouns and constant thematic progression, which disrupted the overall coherence of the essays. The lower-level essays overused the constant thematic progression to organize information. Highly coherent essays, conversely, displayed lexically dense nominal groups in Topical Themes by utilizing multiple types of textual themes to explain complicated abstract notions and deployed varied types of thematic progression (e.g., constant, linear, and derived) to formulate more readable and coherent arguments. Thus, it can be deduced that the deployment of varied thematic choices and thematic progression patterns generates effective academic writing. Marked experiential themes in adult texts can also be used to display the discontinuity as expert writers at times need to “signal his move from one activity sequence to the next” (Martin & Rose, 2008, p. 35). The marked signal new turns of informational settings in terms of time, place, and manner to discontinue the information flow. The discontinuity in the highly valued texts, however, occurs in this manner that “the text’s register, genre, and, consequently its themes” are well established (Couture, 1985, p. 81 as cited in Promwinaie, 2010).

In conclusion, the present research has examined varied types of themes and thematic progression (T/TP) deployed by undergraduate Pakistani students and their impact on the overall coherence of their essays. Despite identifying the highly valued T/TP resources used in argumentative essays, most Pakistani English Language Teachers do not pay attention to the skillful uses of textual metafunction in creating coherence and cohesion throughout the essays. Resultantly, they wrestle difficulties in teaching Pakistani English Language Learners about the linguistic tools of coherence. Hence, the likelihood is that the findings of the present research will present English teaching and learning community explicit T/TP patterns in order to create well-formulated argumentative essays.
Material and Methods

Data Collection and Sampling Method

The current study selected twenty-five argumentative essays of university undergraduate learners drawn from the International Corpus of Learners English (Granger et al., 2009), and the word length of each essay is from 500 to 1000. The topic of each essay is “Are women better parents than men?”. To perform an in-depth analysis of essays, the researchers deployed purposeful random sampling to obtain comprehensive information of Pakistani learners’ thematic choices in their argumentative essays.

Research Framework

The researchers applied two frameworks to conduct a phase-wise analysis of essays: the argumentative genre model and Theme-Rheme and the Thematic Progression (T/TP) of the research framework for this research.

Genre Analysis

Martin and Rose (2008) pointed out the essential stages of argumentative essays (i.e., thesis, argument, and conclusion). They categorized stages into more specific phases, i.e., macro-Theme (i.e., thesis statement), hyper-Theme (i.e., topic sentence), hyper-Rheme (i.e., concluding sentence), and macro-New (i.e., Conclusion stage).

Multiple Themes and Thematic Progression Patterns

Theme as the element of clause serves as “the starting point for the message: it is what the clause is going to be about” (Eggnis, 2004, p. 299). In clause, a writer typically departs from the places which are familiar with the “Theme” or “given” information that has already been mentioned in the text or is familiar from the context. On the other hand, Rheme is defined as the part of the clause in which the theme is developed. It means that, in the clause, the writer departs from the familiar to head towards the unfamiliar the “Rheme” which typically contains the unfamiliar or new information. The following figure provides an overview of the types of themes:

Figure 1 An Overview of Multiple Themes
**Topical Themes.** The topical Theme is the first ideational component in the clause that can be a participant (e.g., I/You/S/he), a process (e.g., Let’s), or a circumstance (e.g., in our society) as depicted in the below figure:

![Sub-types of Topical or Experiential Themes](image)

**Interpersonal Themes.** Topical Themes can also be headed by vocatives (e.g. David, Sir), mood-making devices comprising Wh-interrogatives (e.g., what is the responsibility of woman?), yes/no interrogatives (e.g., Are women parents better than men?), and Let’s- imperative clauses (e.g., Let’s talk together); modal adjuncts, according to Halliday (2014, p.157) consisting of mood adjuncts which include temporal meanings, modality (i.e., modalization and modulation); and comment adjuncts which comment on the clause as whole as given the figure below:

![An Overview of Interpersonal Themes](image)

The following figure illustrates sub-types of modal adjuncts:
The sub-types of mood-making are given below:

- **wh_interrogative**
  - e.g., *What*

- **finite_operator**
  - e.g., *Do you*

- **let_s_imperative**
  - e.g., *Let's*

---

The interpersonal grammatical metaphor (IGM) and its types are displayed below:
Figure 6 Sub-Types of Interpersonal Grammatical Metaphor (Liardét, 2018, p. 71)

Textual Themes. Topical Themes are preceded by textual Themes to organize the information and consist of continuatives (e.g., yes, no, well), conjunctions (e.g., and, but, so), and conjunctive adjuncts which are divided into the following categories:

Figure 7 Sub-types of Textual Themes
**Thematic Progression**

Thematic progression, particularly, shows cohesion and flow of information in the text to analyze how Themes relate to the preceding Themes and Rhemes to observe the method of development of content (Thompson, 2014, p. 175). Bloor and Bloor, (2004) divide thematic progression into the following four patterns as illustrated in the figure:

![Figure 8 Sub-Types of Thematic Progression Patterns](image)

**Analysis Unit for Multiple Themes and Thematic Progression**

The T-unit was selected for the analysis unit. A T-unit means an independent clause with another dependent clause around it (Fries, 1995). The reason is that the T-unit is used to trace the larger thematic pattern in the textual development (North, 2005).

**Procedures Followed in the Analysis of Essays**

The following steps were adopted to analyze the thematic choices and thematic progression of the essays:

i. Manually converting the twenty-five essays into their schematic phases by applying an argumentative generic model of Martin and Rose (2008)
ii. Creating twenty-five folders of each essay containing the notepad files of phases

iii. After manually designing the tagging scheme of textual metafunction in the UAM corpus tool (O'Donnell, 2008), twenty-five folders consisting of 350 notepad files were uploaded to the UAM corpus tool for systematic tagging and counting of frequencies of multiple themes and thematic progression

iv. Annotating the multiple themes and thematic progression choices of the phases of each essay

v. After adding the frequencies, the thematic choices were tabulated according to the phases of the essays.

Analysis and Discussion

This section of the study contains three sub-sections: results, findings, and discussion of theme and thematic progression (T/TP) writing choices utilized by Pakistani English Language Learners in their essays. The result section will depict an overview of frequencies of T/TP patterns in percentages according to each argumentative phase. The findings will illustrate the T/TP variations used in Pakistani students’ essays and their relevant instances. Finally, the discussion section will qualitatively explain the textual impact of thematic choices on the logical flow of the essays. The following table offers an overview of basic information of twenty-five essays:

<table>
<thead>
<tr>
<th>Table 1</th>
<th>Basic Information of Essays</th>
</tr>
</thead>
<tbody>
<tr>
<td>Total Number of Words</td>
<td>1693</td>
</tr>
<tr>
<td>Average word count/per essay</td>
<td>664</td>
</tr>
<tr>
<td>Total T-units</td>
<td>1120</td>
</tr>
<tr>
<td>Average T-units/per essay</td>
<td>45</td>
</tr>
<tr>
<td>Average words/T-unit</td>
<td>15</td>
</tr>
</tbody>
</table>

The above table indicates that the overall T-units in twenty-five essays are 1120, and the number of T-units per essay is 45. The average number of words in each T-unit is 15.

Results of Multiple Themes and Thematic Progression in Pakistani Argumentative Essays

Multiple Themes in Pakistani Argumentative Essays

In the thematic analysis, the themes in Pakistani learners’ essays were analyzed through the three analytical tools, that is, topical themes realized by unmarked and marked themes, interpersonal themes comprising interpersonal grammatical metaphors (IGM), and textual themes comprising conjunctions and conjunctive adjuncts. The following table given below provides a detailed overview of the frequencies of themes for different phases:
Multiple Themes in the Phases of Essays

</tr>
</tbody>
</table>

Table 2 shows that Pakistani students excessively utilized prenominals as sub-types of topical themes.

Thematic Progression in Pakistani Argumentative Essays

In addition to intra-clause coherence, inter-clause coherence is constructed through effective thematic progression. Thus, the thematic progress is tabulated in the below table:

<table>
<thead>
<tr>
<th>Stages</th>
<th>Thesis Stages</th>
<th>Argument Stages</th>
<th>Conclusion Stages</th>
<th>Total</th>
<th>Percentage</th>
</tr>
</thead>
<tbody>
<tr>
<td>Constant</td>

<td>26%</td>
</tr>
<tr>
<td>Split</td>
<td>6</td>
<td>6</td>
<td>2</td>
<td>14</td>
<td>1%</td>
</tr>
</tbody>
</table>

The above table indicated the higher proportion of constant thematic progression in the Pakistani students’ argumentative essays.

Findings of Multiple Themes and Thematic Progression Patterns in Pakistani Argumentative Essays

As flagged above, the excessive employment of topical themes in the essays depicted the majority of topical themes. The topical themes were further categorized into unmarked and marked topical themes. The frequent uses of unmarked topical themes (e.g., they, woman, mother’s role in this regard, and researches) at the theme position mentioned the given information. Then, the new information about women (that is, a character in essays) at Rheme position was given, (e.g., the title given to a creature who is very kind, responsible, caring, and loving, plays a great role in order to bring up a child.”, and “also go outside for a job).

To focus on the particular information in the clause, a meager amount of marked topical themes were used in the texts, for instance, If they are not good …”. “If we throw the light on the past …”. “Because men have to go outside to earn …”. “Despite the distinguish importance of both mother and father, …”. Most examples of marked topical
themes attempted to orientate the readers’ attention on the particular points discussed in the essays, i.e., the personality development of the child.

To show the evaluation and stance in the essays, Pakistani learners utilized a very small amount of interpersonal grammatical metaphors. The following examples conveyed the writers’ stances about mothers (a character in the essays) in their essays, e.g., Now we can say without any hesitation ..., ..., I do not think that, This is why I strongly support. The examples IGM presented learners’ attitudinal stances about their viewpoints. The textual themes deployed in the essays were mostly paratactic conjunctions, (e.g., and, however) to connect their ideas.

In addition to using prenominal themes, Pakistani learners extensively used constant thematic progression (that is, T1-T2-T3-T4...) to describe the qualities of a woman as a mother in their essays.

**Discussion of Multiple Themes and Thematic Progression in Pakistani Learners’ Essays**

**Use of Multiple Themes in Pakistani Learners’ Essays**

The following figure summarized the multiple themes used in Pakistani learners’ argumentative essays:

![Multiple Themes](image)

**Figure 9 Cumulative Frequencies of Multiple Themes in Essays**

The above results of textual metafunction exhibited the Pakistani learners’ heavy reliance on the pronominal at Theme position, resonating with the findings in the following studies (Ebrahimi & Ebrahimi 2012; Green, Christopher & Larn, 2000; Ho 2009; Lu 2013; Wei 2013). The following table presents an overview of Pakistani learners’ writing style:

<table>
<thead>
<tr>
<th>Example of Topical Themes in Pakistani Argumentative Essay</th>
<th>Rheme</th>
</tr>
</thead>
<tbody>
<tr>
<td>In some respects women have excelled men.</td>
<td></td>
</tr>
<tr>
<td>In sports intellectual and artistic pursuits, in office and industry, they have set a new record of honesty and efficiency.</td>
<td></td>
</tr>
</tbody>
</table>

902
They succeeded marvelously as teachers and nurses.

Goldsmith, the famous poet and writer, made a complaint two centuries ago,

Women famed for their valour, their skill in politics or their learning have left the duties of their own in order to invade the privilege of ours.

As also illustrated in the above table, the predominant use of topical themes pointed to the prevent writing style of Pakistan ELLs who repeated similar topical themes several times to add information rather than extending the points, picking up rhemes of clauses at the theme position of the succeeding clauses to construct well-formulated arguments. The internal cohesion, according to Schleppegrell (2004), is formulated in the proficient writers’ text through lexically dense nominal groups at the Theme position and their explanation at the Rheme position. The information unpacked at the Rheme position is, then, packed through lexically condensed nominalization at the Theme position of the next incoming clause. The disorganization of information in Pakistani learners’ essays was further observed through the unplanned usage of marked topical themes. The marked themes in different phases of stages, as mentioned by Hoey (2009), produce a discontinuity in the claims to introduce the new point. Therefore, the discontinuity is linguistically realized via lexically dense prepositional groups to retrospect the previous arguments, and then the new argument is initiated. Pakistani learners, however, constituted the marked themes by placing the subordinate clauses at the Theme position.

Secondly, the quite small number of interpersonal themes in essays most likely indicated Pakistani learners’ unawareness about the prevalent norms of the argumentative genre. The use of interpersonal themes, according to Liardet (2018), produces dialogic expansion to enhance the persuasive power of argumentative discourse by providing uncommitted readers with space to at least disagree with the writer’s viewpoint. The infrequent usage of textual themes deployed in the essays neither linked clauses within a text and the context to make longer sentences nor interpreted the text. Among the textual themes, Pakistani learners preferred to use coordinate conjunctions to connect their arguments, but Crossley and McNamara (2010) and Plakans and Gebril (2017) noted that most advanced L2 writers preferably utilized fewer cohesive patterns. The logical flow of information in the text distinguished a mature writer from a novice writer not explicit uses of cohesive devices.

Thematic Progression in Pakistani Argumentative Essays

Pakistani English Language Learners significantly deployed more constant thematic progression as compared to linear or derived thematic progression to reiterate their ideas by using the same theme at the onset of clauses. Few instances of Linear Thematic progression in which the content placed at the rhyme position converts into the themes of the next clauses were, however, noted in the Pakistani learners’ essays as tabulated below:

<table>
<thead>
<tr>
<th>Themes</th>
<th>Rhemes</th>
</tr>
</thead>
<tbody>
<tr>
<td>The parents</td>
<td>are a great blessing of God</td>
</tr>
</tbody>
</table>

Table 5 Examples of Constant and Linear Thematic Progression in Pakistani Learners’ Essays
It is because of their care and love with children that makes them what they are.

Both of them contribute to their full extent and provide us with utmost facilities.

They try to give their children with best clothes to wear, provide good food to eat etc, so that their children get proper development.

They provide children with best possible education so that their children can stand on their own and compete in the world later on.

Most of the fathers do jobs so that they best earn for their children and provide their families with a happy life.

The above table presents the widespread use of constant thematic progression “T1-T2-T3…” in the’ essays contributing to the more static and redundant arguments. The constant thematic progression is primarily utilized in the description, narration, and classification rather than in argumentative responses (Alonso & McCabe, 2003). The argument progression in argumentative discourse, pointed out by Hawes (2015), is realized by the linear or derived thematic progression to expand and explain the argumentative points which are defended or opposed to orient readers’ attention to the writer’s intentional meanings. Thus, it can be deduced that the overemphasis on prenominal topical themes and constant thematic progression patterns demonstrates the Pakistani learners’ limited understanding regarding effective strategies used to link arguments in their essays.

Conclusion

This research analyzed the writing skills of Pakistani English Language Learners by applying Theme-Rheme and Thematic Progression choices to their argumentative essays. The researchers found that Pakistani learners dominantly used topical themes in comparison to interpersonal and textual thematic choices, especially pronouns, and constant thematic progression patterns to organize information. The use of the foregoing lexico-grammatical choices converted Pakistani argumentative essays into descriptive discourse rather than the use of lexically dense thematic choices and linear thematic progression. The scantiness in interpersonal thematic resources pointed out that Pakistani learners overused the bare assertions to communicate their notions and, resultanty, did not afford dialogic space to their readers to disagree with writers. The underuse of textual thematic patterns in Pakistani learners’ essays revealed their incapacity of logically linking the clauses across the text to substantiate their arguments. Despite a small sampling of twenty-five essays, it is quite likely that the research findings will help the Pakistani English teaching and learning community in using a broad range of explicit linguistic choices required to create coherent and convincing arguments in the argumentative written discourse.
